Embed events on website

08/04/2025 10:58 am PDT

PRO ⓘ *Embedded events requires a Heylo Pro subscription. Learn more here.*

Display a live calendar of your Heylo events directly on your own website with a single code snippet.

Events inherit your site's fonts and colors, shows real-time registration counts and host details, and updates instantly whenever you add or edit events in Heylo—no manual edits required. Because it surfaces your public events, visitors can review details, register, or join without leaving your page, driving higher visibility and attendance while keeping your calendar perfectly in sync.

Why embed your Heylo event calendar

- **Uplift your website** – Showoff all your upcoming events, with registration counts, hosts, and event details.
- **Maintain your branding and design** – Heylo events will adopt your font and colors to keep the look and feel of your site.
- **Streamline onboarding** – One-click registration for your members from your site. Each event has a separate registration link.
- **Save time** – No need to manually update your website's events. Add your embedded events once, and your website's calendar stays up to date. No need to update cancellations or other details.

Event visibility

Leaders can control whether events in their Heylo group appear on their website or not. Each event has an event setting to designate the visiblity with only public events on the site.

Only public groups on Heylo can utilize embedded website events.

How it works

- Navigate to group admin settings from the group tab
- See Website embed section
- Generate code snippet
- Copy code snippet
- Paste into website builder*

*Works with any Squarespace, Shopify, Wordpress, or other website builder. Note, the "preview" on Squarespace will look misformatted when previewed, but will look perfect once published!
